

Table 4: Protective Action Criteria (PAC) Rev 24 in mass per unit volume (mg/m³), based on applicable AEGLs, ERPGs, or TEELs (Chemicals listed in alphabetical order)

PAC Rev 24 – August 2008

Table 4 presents an alphabetical listing of the chemicals in the PAC data set and provides Chemical Abstract Service Registry Numbers (CASRN), PAC data, and technical information on the source of the PAC values. Table 4 provides PAC values for TEEL-0, PAC-1, PAC-2, and PAC-3 in units of mass per unit volume, with the ppm to mg/m³ conversion (carried out at 25 °C and 760 mm Hg) performed before rounding.

The columns presented in Table 4 provide the following information:

Heading	Definition
No.	The ordered numbering of the chemicals as they appear in this alphabetical listing.
Chemical Name	The common name of the chemical.
CASRN	The Chemical Abstract Service Registry Number for this chemical.
TEEL-0	This is the threshold concentration below which most people will experience no appreciable risk of health effects. This PAC is always based on TEEL-0 because AEGL-0 or ERPG-0 values do not exist.
PAC-1	Based on the applicable AEGL-1, ERPG-1, or TEEL-1 value.
PAC-2	Based on the applicable AEGL-2, ERPG-2, or TEEL-2 value.
PAC-3	Based on the applicable AEGL-3, ERPG-3, or TEEL-3 value.
Source of PACs: TEEL-0, PAC-1, PAC-2, PAC-3	<p>Technical comments by the developers of the PAC data set that indicate the source of the data used to derive PAC values. The term “SAR,” often in red font, stands for “Structure Activity Relationships.” Other abbreviations are defined below or in the introductory material found at: http://www.hss.energy.gov/HealthSafety/WSHP/chem_safety/teel.html/.</p> <p>This column will be enhanced in the near future to improve the clarity and completeness of its information.</p>

Chemicals for which **AEGLs** are available have their chemical name, CASRN, and actual values displayed in a **bolded and larger font**. Chemicals for which **ERPGs** are available, but no AEGLs, have their chemical name and CASRN displayed in a **bolded** font. Chemicals for which TEELs are available, but no AEGLs or ERPGs, have their chemical name and CASRN displayed using a regular font.

The following information is pertinent to the derivation of hierarchy-based TEEL values:

- Values are restricted by the hierarchy-based TEEL for the next higher category so that: TEEL-0 ≤ PAC-1 ≤ PAC-2 ≤ PAC-3.
- The most recent available references for Permissible Exposure Limits (PELs), Threshold Limit Values (TLVs), Recommended Exposure Limits (RELs), Workplace Environmental Exposure Levels (WEELs), and German limits (MAKs) are used. The most convenient

source for these values is the *Guide to Occupational Exposure Values – 2008*, compiled by the American Conference of Governmental Industrial Hygienists.

- For particulate materials, limits used (in mg/m³) are for total dust, even though limits are sometimes also given for the respirable fraction.
- PNOS = Particulates Not Otherwise Specified. This TLV-TWA value is for total dust, and the respirable fraction is assumed to be 30% of total concentration.
- For substances that are in particulate form, all TEEL values have been reduced to a maximum value of 500 mg/m³. This concentration constitutes an upper bound for a stable cloud of respirable dust. The reason for this is that the coagulation rate of particles is a function of the square of the concentration number. Higher concentrations are unstable.
- For a few chemicals whose ERPG-1 value was odor-based rather than toxicity-based, the PAC-1 value was adjusted to the PEL-STEL, TLV-STEL, or 3 x TLV-TWA value. This is noted in the Source of PACs Column when this substitution is made.
- In the absence of other concentration limits or appropriate toxicity data for a chemical, a few values are based on British, Finnish, Russian, or other guidelines.
- The usual order of use of toxicity data for TEEL-2 and/or TEEL-3 is subordinate to human toxicity data for a particular chemical. A few values depart from the usual guidelines and are estimates based on existing concentration limits (at other TEEL values) and/or a comparison with similar chemicals and/or a review of available toxicity data. For example, the TEEL-3 value for 1-Bromo-3-chloro-5,5-dimethylhydantoin is estimated from the toxicity-based TEEL-3 for 3-Bromo-1-chloro-5,5-dimethylhydantoin.
- The PAC values presented in these tables are toxicity-based. In order to alert users as to the potential for other explosion and flammability hazards, Table 2 uses special formatting to indicate the relationship of these values to the Lower Explosive Limit (LEL) of a chemical substance.
